- ◇ GRANITE CURBING
- ◇ GRANITE PALISADES
- ◇ NATURAL CURBING
- ◇ GRANITE STEPS
- ◇ GRANITE SLABS
- ◇ WALLSTONE

### GRANITE COBBLESTONE

It is currently the most stable and most practical method for coating the surface of the ground. The use of *granite blocks* solves the problem of drainage ounce and forall. It is also resistant to all weather conditions including harsh winters and cold frost. The rough texture of *granite blocks* make slipping a thing of the past. You can also use our **cobblestone** on your driveway.

### STONE AGGREGATES, SUBSTRUCTURE

During the construction of a road, sidewalk ,driveway or any other infrastructure you should ensure proper curing of the site. To do this,*crushed granite* is used to give the structure stability and a good foundation. A foundation is an important element to protect your investment as well as preventing ground water from entering your structure. Application frameworks consisting of **crushed granite** measuring 15-45 cm deep ensures effective protection for many years.

### MATERIAL MEETS EUROPEAN STANDARDS

#### GRANITE CURBING AND PALISADES

**Granite curbs** are the most durable product used in the construction of roads, bridges and other infrastructures. It is a material which has more strength and greater performance than concrete.

The use of this type of material insures your investment will remain intact for many years.it is extremely durable, even the coldest of winters and the heaviest of truck tire are not able to significantly damage the *granite*.

#### SLABS FLAMED OR POLISHED

If you are looking for home flooring tile you have to keep in mind certain aspects. For the exterior our *granite slabs* are washed, sand-blasted or burned so they are more resistant to weather conditions, mechanical damage, or simply time. Due to its structure and appropriate hardness they can also withstand heavy traffic.
